TLV271

Single-Channel, Rail-to-Rail Output, 3 MHz BW Operational Amplifier

The TLV271 operational amplifier provides rail−to−rail output operation. The output can swing within 320 mV to the positive rail and 50 mV to the negative rail. This rail−to−rail operation enables the user to make optimal use of the entire supply voltage range while taking advantage of 3 MHz bandwidth. The TLV271 can operate on supply voltage as low as 2.7 V over the temperature range of −40°C to 105°C. The high bandwidth provides a slew rate of 2.4 V/µs while only consuming 550 µA of quiescent current. Likewise the TLV271 can run on a supply voltage as high as 16 V making it ideal for a broad range of battery−operated applications. Since this is a CMOS device it has high input impedance and low bias currents making it ideal for interfacing to a wide variety of signal sensors. In addition it comes in a small TSOP−5 package with two pinout styles allowing for use in high−density PCB's.

Features

- Rail−To−Rail Output
- Wide Bandwidth: 3 MHz
- High Slew Rate: 2.4 V/µs
- Wide Power−Supply Range: 2.7 V to 16 V
- Low Supply Current: 550 µA
- Low Input Bias Current: 1 pA
- Wide Temperature Range: −40°C to 105°C
- Small Package: 5 Pin TSOP−5 (same as SOT23−5)
- These Devices are Pb−Free, Halogen Free/BFR Free and are RoHS Compliant

## Applications

- Notebook Computers
- Portable Instruments

MAXIMUM RATINGS

Symbol	Rating	Value	Unit
V_{DD}	Supply Voltage (Note 1)	16.5	V
V_{ID}	Input Differential Voltage (Note 2)	± Supply Voltage	V
V_I	Input Common Mode Voltage Range (Note 1)	−0.2 V to (V_{DD} + 0.2 V)	V
I_I	Maximum Input Current	± 10	mA
I_O	Output Current Range	± 100	mA
	Continuous Total Power Dissipation (Note 1)	200	mW
T_J	Maximum Junction Temperature	150	°C
θ_{JA}	Thermal Resistance	333	°C/W
T_{stg}	Operating Temperature Range (free−air)	−40 to 105	°C
T_{stg}	Storage Temperature	−65 to 150	°C
	Mounting Temperature (Infrared or Convection − 20 sec)	260	°C

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.
1. Continuous short−circuit operation to ground at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of 45 mA over long term may adversely affect reliability. Shorting output to either V+ or V− will adversely affect reliability.
2. ESD data available upon request.

DC ELECTRICAL CHARACTERISTICS (V_{DD} = 2.7V, 3.3V, 5V & ± 5 V (Note 3), T_A = 25°C, $R_L \geq$ 10 kΩ unless otherwise noted)

Parameter	Symbol	Conditions		Min	Typ	Max	Unit
Input Offset Voltage	V_{IO}	VIC = V_{DD}/2, V_O = V_{DD}/2, R_L = 10 kΩ, R_S = 50 Ω			0.5	5	mV

APPLICATIONS
Figure 31. Voltage Reference

$$V_O = 2.5 \text{ V}(1 + \frac{R1}{R2})$$

$$V_{ref} = \frac{1}{2}V_{DD}$$

$$f_O = \frac{1}{2\pi RC}$$

For: f_o = 1.0 kHz
R = 16 kΩ
C = 0.01 µF
Figure 32. Wien Bridge Oscillator

$$V_{in}L = \frac{R1}{R1 + R2} (V_{OL} - V_{ref)} + V_{ref}$$

$$V_{in}H = \frac{R1}{R1 + R2} (V_{OH} - V_{ref)} + V_{ref}$$

$$H = \frac{R1}{R1 + R2} (V_{OH} - V_{OL})$$
Figure 33. Comparator with Hysteresis
Given: f_o = center frequency
  $A(f_o)$ = gain at center frequency

Choose value f_o, C
Then : $R3 = \dfrac{Q}{\pi f_O \, C}$

$$R1 = \frac{R3}{2 \, A(f_O)}$$

$$R2 = \frac{R1 \; R3}{4Q^2 \, R1 - R3}$$

For less than 10% error from operational amplifier,
$((Q_O \, f_O)/BW) < 0.1$ where f_o and BW are expressed in Hz.
If source impedance varies, filter may be preceded with
voltage follower buffer to stabilize filter parameters.
