

Micro Zoom Series **640** w/ Coaxial Illumination PK 5

Inspect small shiny parts with parfocal lens

Objects stay focused as magnification zooms to 190x

This micro lens system with a broad magnification range and in line LED coaxial illumination is ideal for small shiny parts inspection. The zoom lens with detents is parfocal so viewed objects stay in focus when switching from low to high magnification. No PC is needed for image processing.

The package includes:

- 640 micro lens with detents and coaxial LED adapter with illuminator
- 1x objective lens and 1x coupler
- Rack and Pinion focus mount with adapter plate
- Heavy duty post stand
- HD 1080p camera with built in USB image capture and HDMI output
- 22" HD LCD monitor with HDMI input

This system with the included 22 inch monitor produces a magnification range of 39x to 262x. It is ideal for viewing small shiny parts at high magnification. Coaxial illumination eliminates glare normally associated with viewing shiny parts.

Features

- In line coaxial LED illumination helps reduce glare when inspecting shiny parts
- Color HD camera with movable and switchable crosshairs
- On screen menu for controlling color, contrast and white balance
- Parfocal lens system
