(Last Modification Date)

### High Temperature, 12 stage binary counter

#### General Description

The CMT-74-4040 is a 12-stage asynchronous binary counter.

The device is incremented on the falling edge (negative transition) of the CLOCK input. All the outputs are reset to a low level by applying a logical high on the CLEAR input.

In frequency divider applications, the clock can be divided by up to 4096.

The device is pin compatible with the industry standards 74xx4040, / CD4040. As such, CISSOID CMT-74-4040 can replace advantageously the above devices and bring a lifetime increase of 1 to 2 decades depending on the temperature range; it also increases the operating temperature capability to -55~+175°C which cannot be achieved by traditional products.

The CMT-74-4040 can operate with supply voltages from 3.3 to 5V (±10%).

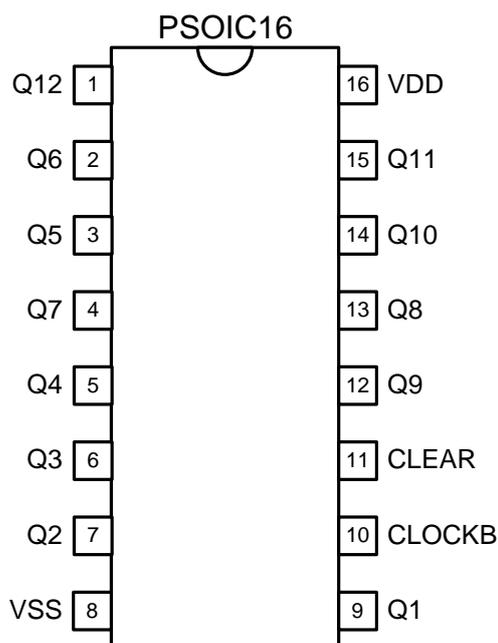

#### Features

- Functional from -55 to +175°C (Tj)
- 3.3 to 5V (±10%) supply voltages
- Latchup-free at any supply and temperature condition
- Available in plastic SOI16 standard package
- Typical propagation delay: 19 ns
- Low quiescent current: 21µA Max (@175°C, 5V)
- Output drive capability: 4mA Max
- Validated at 175°C for 1000 hours (and still on-going)

#### Applications

- Clock generation
- Frequency division
